Forecast for Tuesday 06 Jul 2021

Weather: Extensive low cloud and rain or drizzle affecting the entire park at the start of the day. The rain will become lighter and patchier through the early daytime, but it will become breezy. Meanwhile, the low cloud will turn more scattered and lift, allowing some brighter spells to develop. However, further low cloud will begin to cover the park from the mid-afternoon onward, with further outbreaks of drizzle and rain possible along with strong winds on hilltops through the evening and into the night.

Chance of cloud free mountain/hill tops above 600m: 40% to begin with. Rising to 70% during the late morning and early afternoon. Falling to 20% from mid-afternoon onward.

Visibility: Cloud bases widely 300-400m at first, with variable amounts dropping further to 100-200m, during the early morning and then again from mid-afternoon onward. Combined with the heavy rain, there will be very poor visibility during these periods. Conditions improving for a time late morning and early afternoon, with cloud bases lifting to above the summits and the rain easing.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Heavy rain and low cloud will make walking very difficult for periods of the day. Only very experienced hikers/navigators should be out on the hills. Strong sunshine during any brighter periods in the middle of the day mean sunscreen is necessary.

Recent rainfall: measured at Neuadd: altitude 353m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
02:00 on Tue 06 Jul 2021	16.6mm	26mm	29mm

Forecast for Wednesday 07 Jul 2021

Weather: Low cloud persisting through Wednesday morning, with continued spells of drizzle and light rain. The cloud will lift over the course of the afternoon as the precipitation transitions into showers, some of which may be heavy. The risk of showers continuing in the evening but then dying down into the night.

Maximum wind: Winds on the summits initially southwesterly 25mph, gusting 35mph. Transitioning to westerly 10mph in the evening.

Chance of cloud free mountain/hill tops above 600m: 20% in the morning, rising to 70% from mid-afternoon.

Visibility: Cloud bases 200-300m through the morning, bringing poor visibility to all areas and very poor in any drizzle or rain. The cloud will lift through the afternoon and eventually rise above the summits, eventually allowing good visibility of surrounding areas.

Temperature: **Valleys:** Plus 13 Celsius, rising to plus 18 Celsius.
At 600m: Plus 10 Celsius.
Freezing level: Above the summits all day.
